New Currency Feature

Update Alert – New Currency Feature in ACMS

We're pleased to share that soon ACMS will receive a very important update!

With the new currency feature, it will be possible to record donations and offerings in different currencies directly when entering receipts.

What Changes

- During the process of creating a new package, you will be able to select the currency of the amount received (e.g., Dollar, Euro, etc.) and input the current exchange rate.
- The system will issue the receipt in the chosen currency, ensuring clarity for the donor.
- However, the financial transaction and departmental records will continue to be registered in the country's official currency.

 Practical Example If you received an offering of US\$ 6.00:

1. Select United States Dollar (USD) when creating the package;
2. Input the current exchange rate (e.g.: 1 USD = BRL 5.60);
3. The receipt will be issued in Dollars, but the financial and departmental record in the system will remain in Pound or Euro.

Attention Treasurers!

- This update requires care with the exchange rate provided;
- Avoid manual adjustments to the converted amounts;
- Check all details before saving the package.

 Important: This is an alert message. Over the next few days, we will continue sending reminders about this new feature, and the new version will be made available soon.
