7me Link / QR Code

New Feature: 7me Link / QR Code

We're pleased to share an important update feature on ACMS!

7me Link / QR Code, which allows you to generate personalized payment links and QR Codes through 7me. This functionality is especially useful for:

- Church events and programs;
- Mission projects ;
- Construction and renovation campaigns;
- Pathfinder, Adventurer, and other departments;
- Special actions and campaigns .

With this feature, the treasurer can generate a QR Code or link directed to a specific fund, with a fixed or flexible amount, making it easier for members to contribute.

Important During Offering Time

It is no longer necessary to share the church's PIX key during the offering.

With the new functionality, the church can generate a QR Code with the church fixed, which automatically displays all available funds for offerings. This way, each member can choose directly which fund to contribute to—without errors and without additional instructions.

This improvement provides:

- Greater accuracy in directing offerings to specific funds (such as tithe, offerings, etc.);
- Faster processing of offerings, as the system automatically handles all information;
- Real-time receipt issuance, eliminating the need for manual entries later;
- Increased security, avoiding the sharing and use of incorrect or even fraudulent PIX keys that do not belong to the church;
- Simply project the QR Code during the offering or share it in church materials.

Step-by-Step to Generate a QR Code / Link

In the ACMS menu, look for '7me' then click 'Giving Link - QR Code'.

The screenshot shows the ACMS Home dashboard. On the left is a navigation menu with items like Home, Member, Church, Departments, Income, Expenses, Financial Transactions, Asset Register, 7me, Giving Link - QR Code, and Reports. The '7me' and 'Giving Link - QR Code' items are highlighted with a green box. The main content area shows a 'Welcome!' message with a quote, and several data cards for 'General Information' including Members (26), Transfers (0), Pending Transfers In/Out (0), Member Requests (0), and Whereabouts unknown (1). There are also 'Balances' cards at the bottom.

1. Click + New

The screenshot shows the '7me Giving Link - QR Code' interface. At the top right, there are user profile icons for 'jane Huss' and 'Buc Church One District 1 - BUCDC'. Below is a search bar with a '+ New' button. A table is displayed with the following columns: Church, Qr Code Budget, Department, Amount, Fixed Church, Status, Locked category, and Qr Code Validity. The first row of the table shows '1 - Buc Church One' in the Church column, and '0.00' in the Amount column. There are search icons in the table headers and a 'Q Search' button at the bottom left.

2. Fill in:
- Church (fixed or not fixed)
 - QR Code Budget (disponible categories/optional)
 - Amount (optional)
 - QR Code validity (optional)
 - Description

Additional Information – Generating QR Codes in ACMS 7me

🔗 Explanation of the options “Fixed Church,” “Lock Fund,” and “Amount”...

◆ **Fixed Church**

When selecting the Fixed Church option during QR Code creation, the offering (tithe or donation) will always be directed to the church chosen during setup. If this option is not selected and the chosen fund exists in other churches, when accessing the QR Code, the donor will automatically be directed to make the offering in their home church for the same fund configured in the QR Code.

💡 *Whenever a specific local church fund is chosen, the system will automatically select the Fixed Church option to ensure the offering goes to that church.*

◆ **Lock Fund**

When activating the Lock Fund option, the offering will be exclusively directed to the selected fund, without allowing the donor to add other funds during the offering. If Lock Fund is not activated, the donor can include other funds in addition to the one configured in the QR Code.

◆ **Amount**

When defining an amount during QR Code creation, the system will automatically direct the offering with the pre-set amount. If the amount field is left blank, the donor can choose the offering amount at the time of payment.

💡 *These options were created to provide greater precision in directing offerings, faster processing and receipt issuance, and increased security and standardization—ensuring that every offering is correctly allocated to the corresponding church and fund.*

✅ Great, now you can manage the QR code and its settings as well.
